

Mockup Updates — v1.3

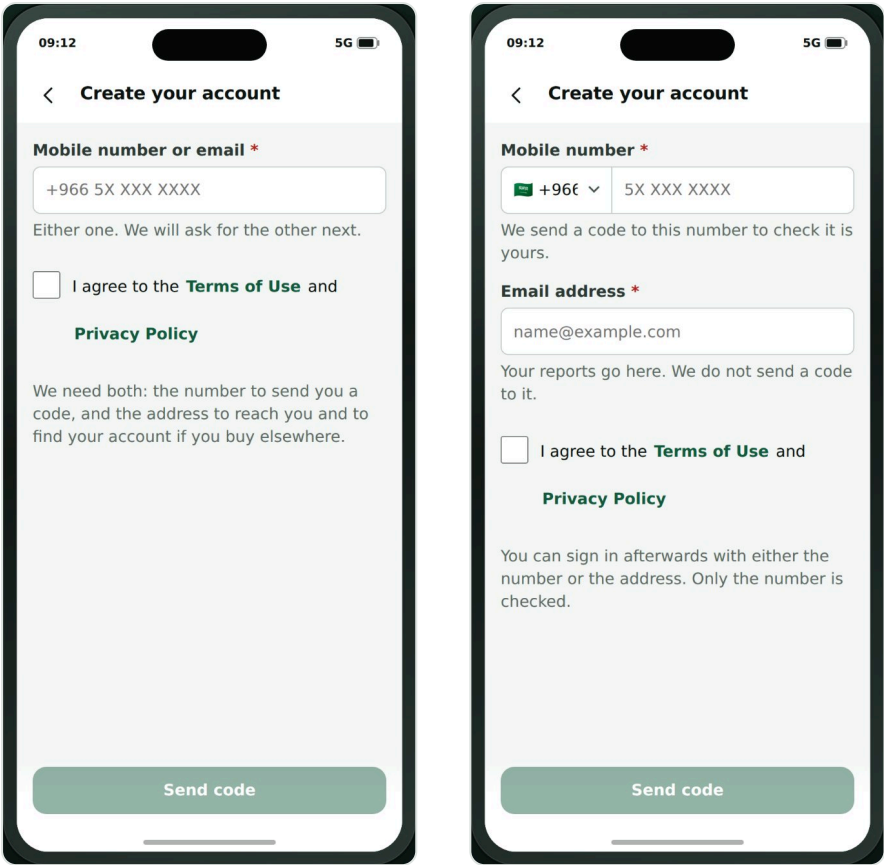

All changes between version 1.2 and version 1.3 of the Wafra Farm App mockup, screen by screen.

Each screen is shown before and after, with the list of changes underneath. A dashed frame means the screen did not exist in v1.2.

Romain Bigare

Wafra Farm App · 33 screens · iPhone 16 Pro Max, English, Owner role, Combined Pro plan

A5 Sign up

BEFORE

AFTER

- C056 Mobile number is now validated with a six-digit code. Email is collected but not verified, so no one gets locked out over a bounced address.
- C056 Sign-in still accepts either. Registration requires a verified number because that's where work alerts and worker records go.
- Replaced the "type either one" flow with dedicated number and email fields.

A6 Verify code

09:12 5G

Enter your code

We sent a 6-digit code to +966 5X XXX XXXX

The code is valid for 10 minutes.

1 2 3

4 5 6

7 8 9

0 <

Resend code (available in 45s)

Mockup: any six digits continue. 000000
simulates a wrong code.

BEFORE

How do you measure land? *

☐ Dunum ☒ Hectare

We have set this from your country. You can change it in Settings.

Workers invited to a farm can sign in with a code and do not need a password.

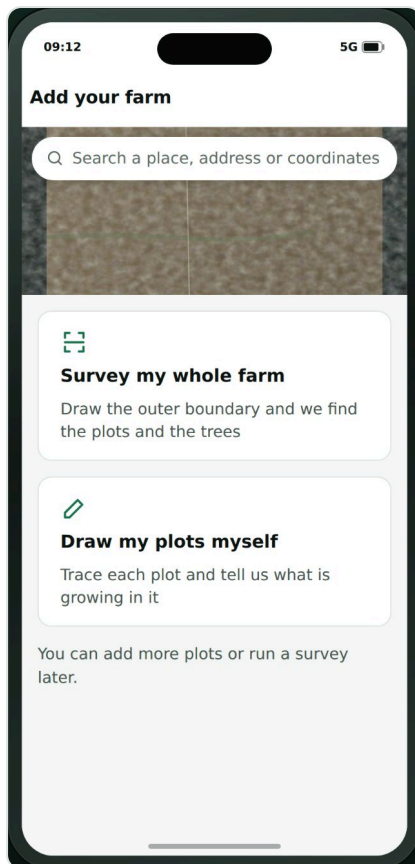

Continue

AFTER

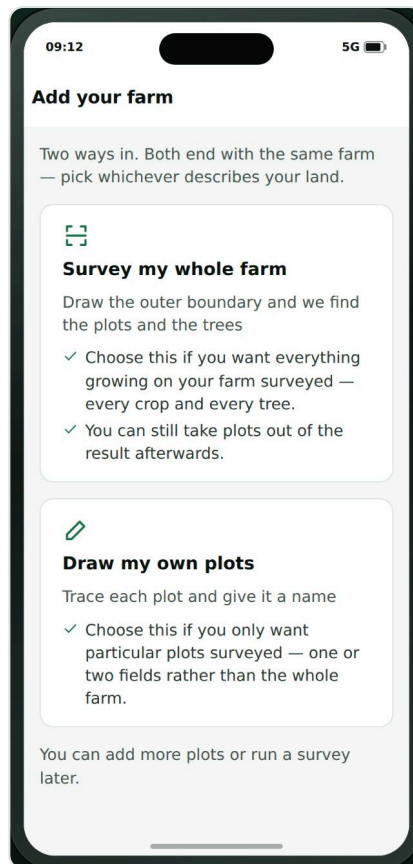

C058, C067

Acre removed from the measurement options, app-wide. Dunum and hectare only.

A9 Add your first farm

BEFORE

AFTER

C091, C092

"Draw my plots myself" renamed to "Draw my own plots".

C102–C106

Each route now explains when to choose it — they serve different needs, and the choice affects what gets quoted.

C107, C108

The survey route mentions that plots can still be removed from the result afterwards.

C134

Satellite strip replaced by the new coverage question.

A12 What should we cover?

09:12 5G

Farm details

Farm name *

Al Kharj North

What is on this land? *

Choose one

That is everything. Anything else we need, we ask when it changes an answer.

Save farm

BEFORE

09:12 5G

What should we cover?

We will look for both, and watch — and charge for — only what you pick here. You can change it later.

Field crops
Everything you sow and harvest — wheat, alfalfa, potato, tomato

Date palms and fruit trees
Counted and priced per tree — date palm, citrus, mango, grape

Both
One subscription covering the fields and the trees

We work out what is actually there from the imagery. This only says what you want us to watch.

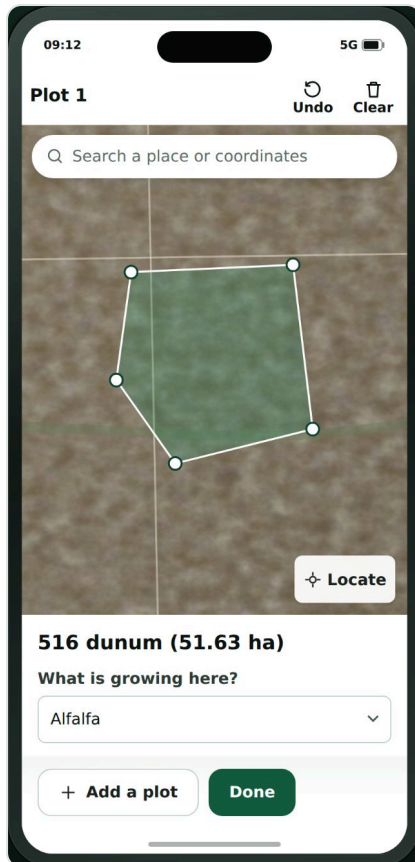

Continue

AFTER

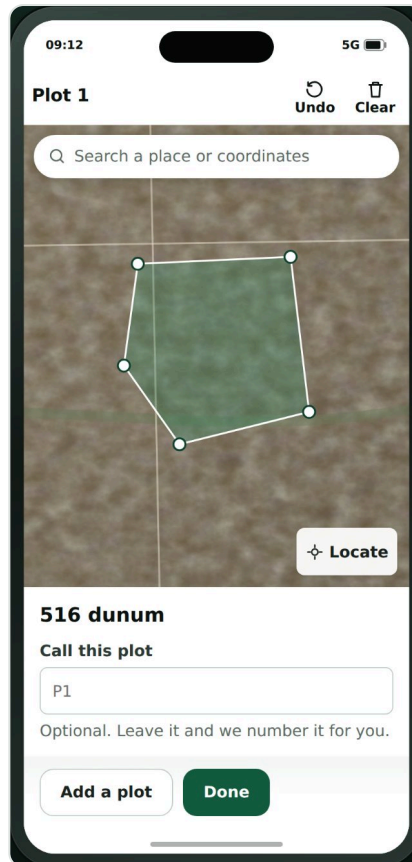

- C129–C134** New question asked before the survey: crops, trees, or both. This filters the survey result and plan pages, so a date grower isn't quoted for fallow ground.
- C154, C155** Farm-name confirmation screen removed. Farms are named automatically and can be renamed any time in settings.
- C078, C093** "What is growing here" no longer asked — the survey detects it, so we avoid asking for something we already know.

A9D

Draw my own plots

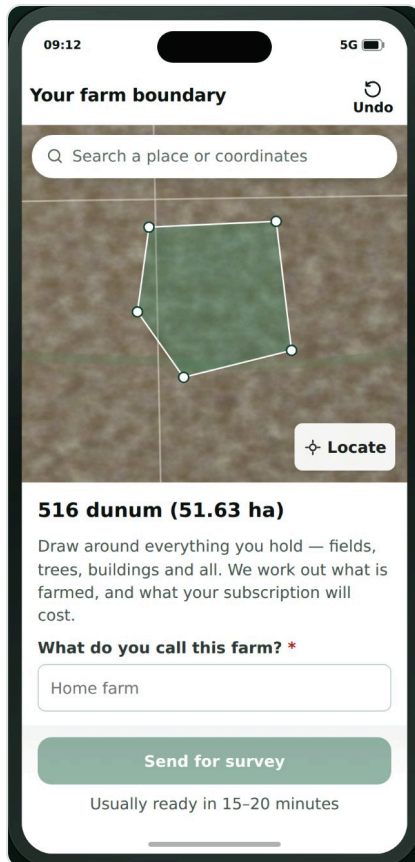

BEFORE

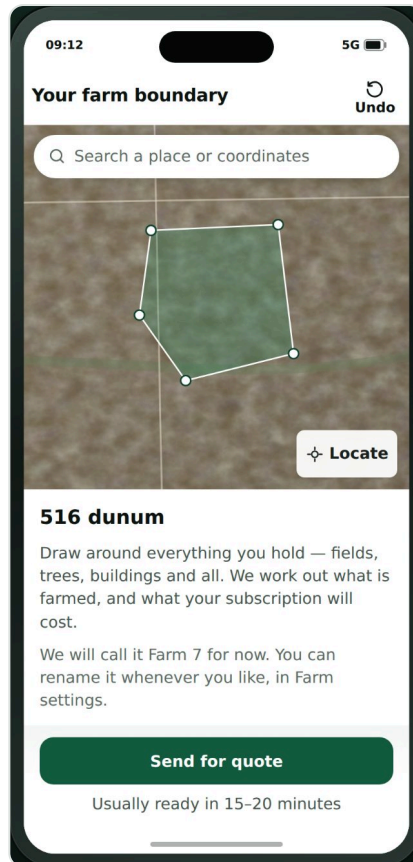

AFTER

- C093** Crop picker below the canvas removed.
- C094, C095** The farmer names each plot instead. Left blank, it's numbered automatically.
- N01** Traced plots are now listed on the same screen, with rename and remove options — no need to restart the flow to fix a mistake.

A10 Survey my whole farm

BEFORE

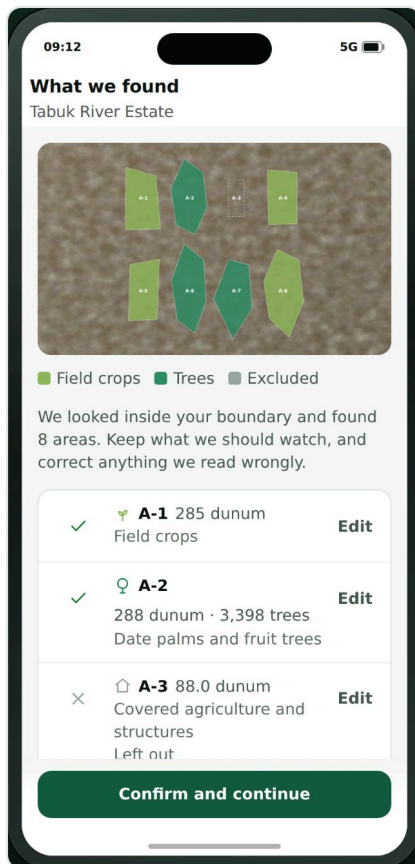

AFTER

C082 "Send for survey" changed to "Send for quote" — the quote is what the farmer is waiting for.

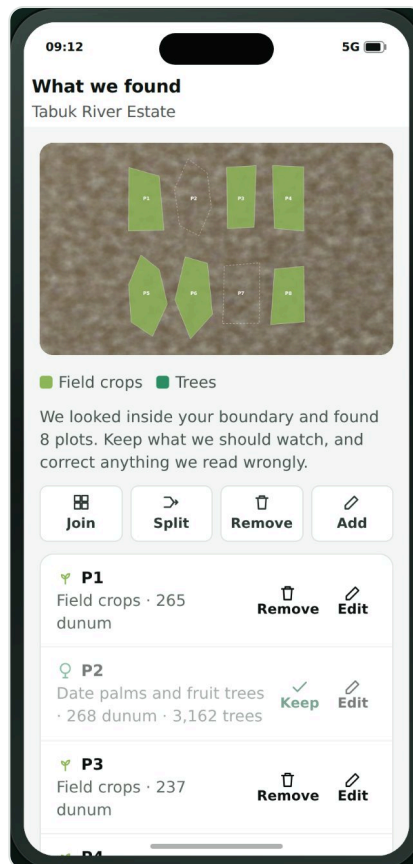

C154 Farm-name field removed. The automatic name is shown, with a note on where to change it.

C074, C075 Simplified to one unit throughout the app. Hectares show one decimal place.

A11 What we found

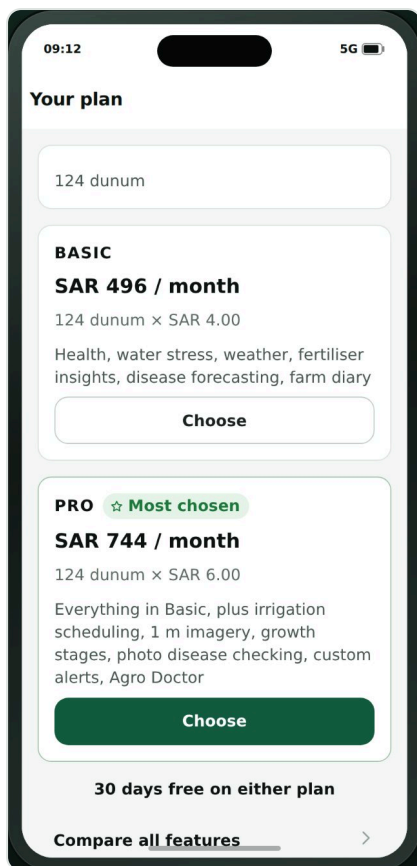

BEFORE

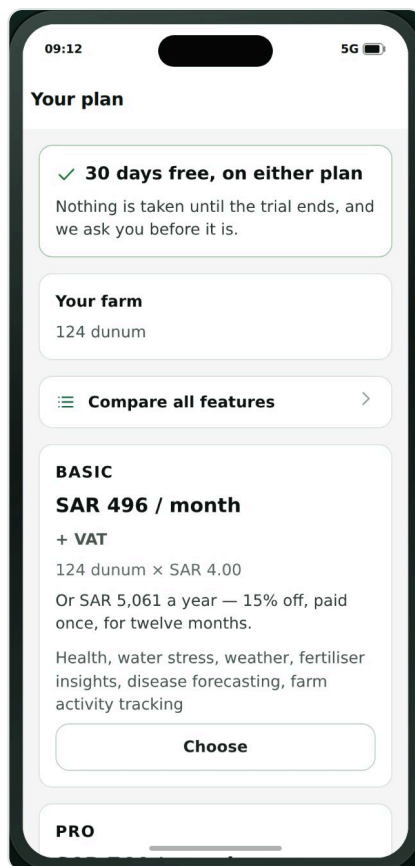

AFTER

- C116–C118** Structures removed from the survey entirely — building detection sits outside the scope of a farm service.
- C112, C113** Plot name on the left, actions on the right: Keep, Remove, Edit.
- C114, C115** Remove greys the row instead of deleting it, and Keep brings it straight back.
- C120–C125, C127, C136** Plot edits consolidated into a four-tool toolbar — Join, Split, Remove, Add — each asking which plots to apply to.
- C126** Removed the "+" icon beside Add.
- C145, C152** Removed the "left out" total and the note about keeping a record of removed ground.
- C151** Confirm button moved into the totals box, so it appears once the farmer has reviewed the full list.
- C144** Trees-only farms now show a count and a tree-type picker instead of plot-by-plot options.
- C273–C276** Plots carry their final names from the start: farm name plus a number.
- WF4.091** No pricing on this screen — pricing comes after scope is confirmed.

A13 Your plan and price

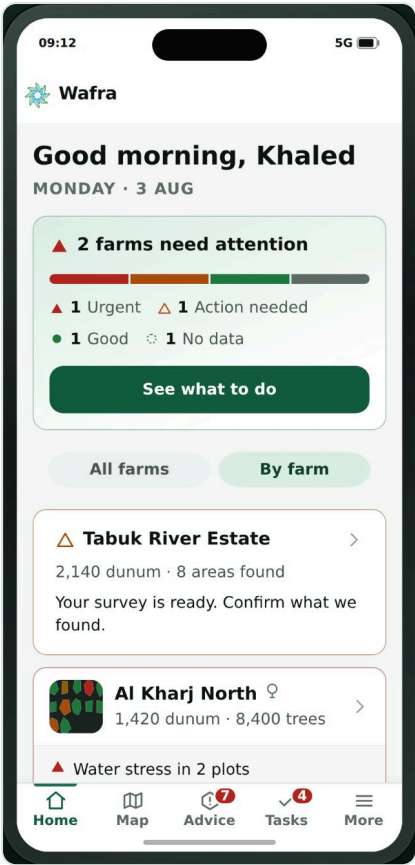

BEFORE

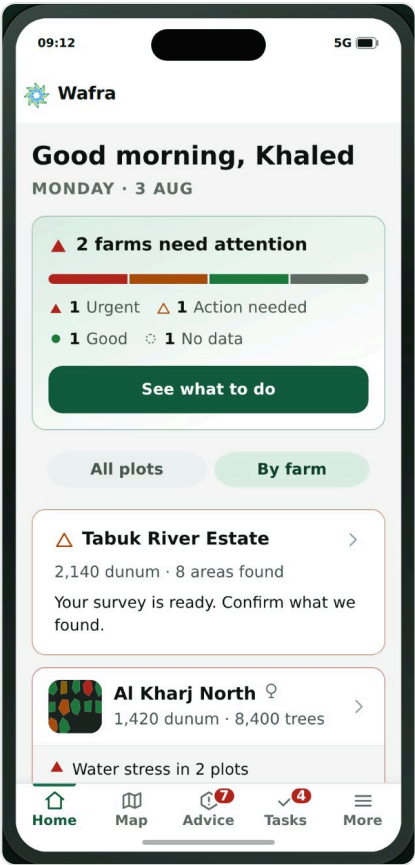

AFTER

- S36 The 30-day free trial now leads the page, front and centre.
- S01 "Compare all features" moved to the top, where it's easier to find before choosing.
- S03 Both Choose buttons use the same neutral colour, and the "Most chosen" badge is gone.
- S34 Prices now state "+ VAT".
- S32 Annual option with its 15% discount shown on each card, as a saving off the monthly figure.
- S35 The page confirms that permission is asked before any payment.
- S06 Warnings grouped together at the end under "Before you buy".

B1 Home

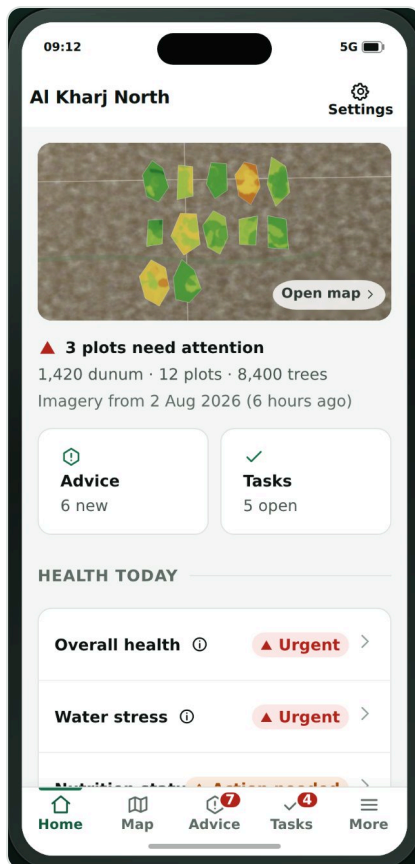

BEFORE

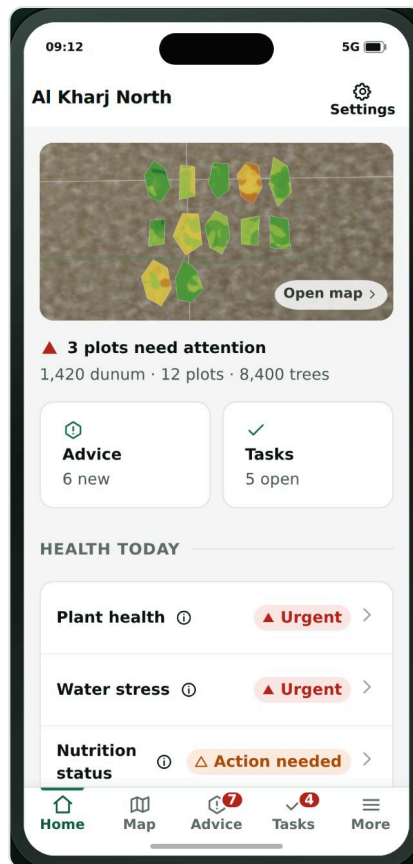

AFTER

- C266 "All farms" tab renamed to "All plots" — it lists plots, so the label now matches the content.
- C272 Plot names include the farm name in this cross-farm list (e.g. Al Kharj North P1), so they're clear out of context.

B2 Farm detail

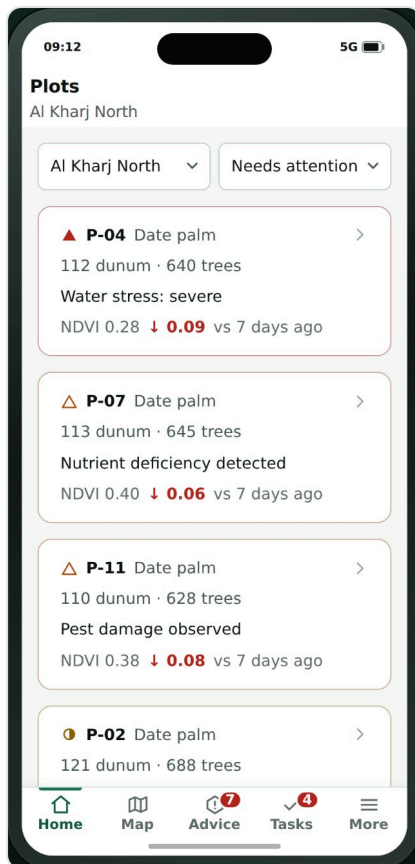

BEFORE

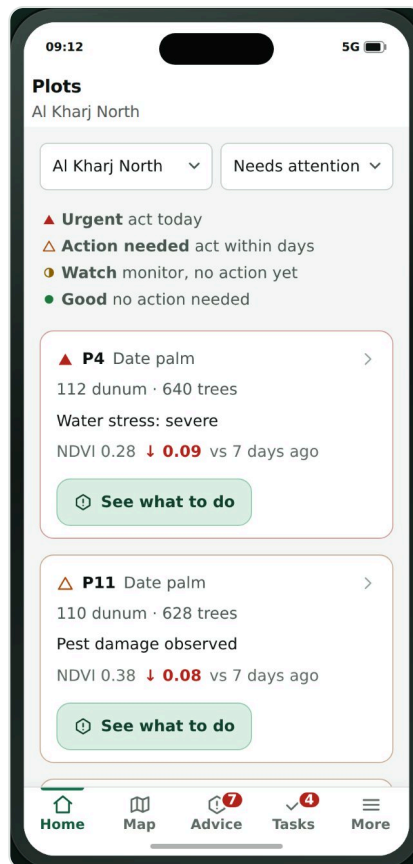

AFTER

- C315, C320** Simplified to three metrics: Plant health, Water stress, Nutrition status.
- C314** Water stress moved to second position — in this region it's the most time-sensitive indicator.
- C315** "Growth and vigour" removed as a top-level metric; it's part of plant health. Still available on the plot page and map.
- C313** Renamed to "Nutrition status" (was "Soil health").
- C301** Removed the "imagery from..." date line. Image age already shows on the farm card and the plot's date stepper.

B3 Plots

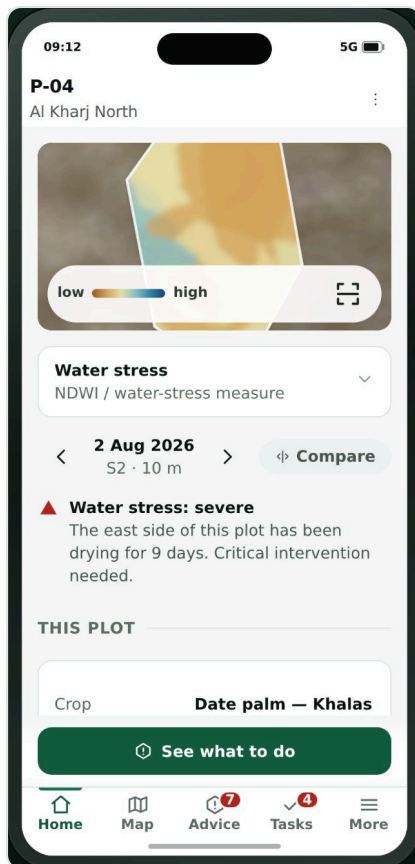

BEFORE

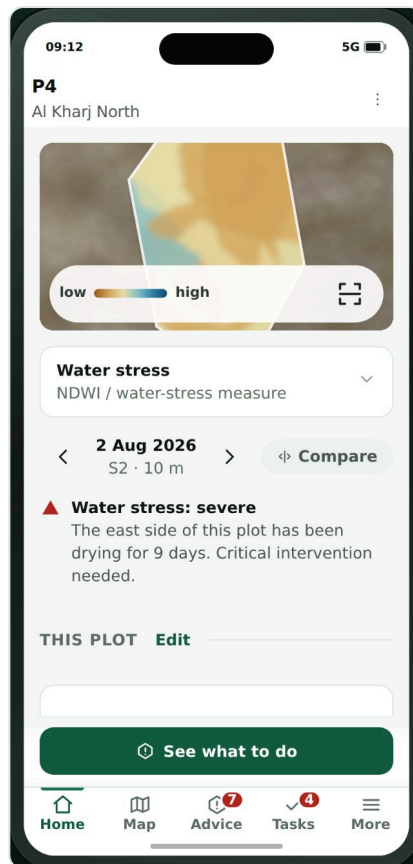

AFTER

- C344** Added a colour legend at the top, drawn from the status scale so it always matches the rows.
- C342** Plots with issues now link directly to the relevant advice.
- C272** Farm-qualified names in the all-farms view; short form within a single farm.

B4 Plot detail

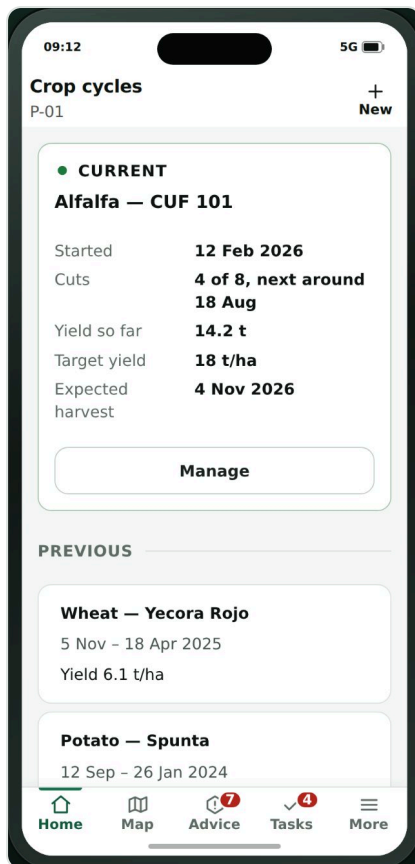

BEFORE

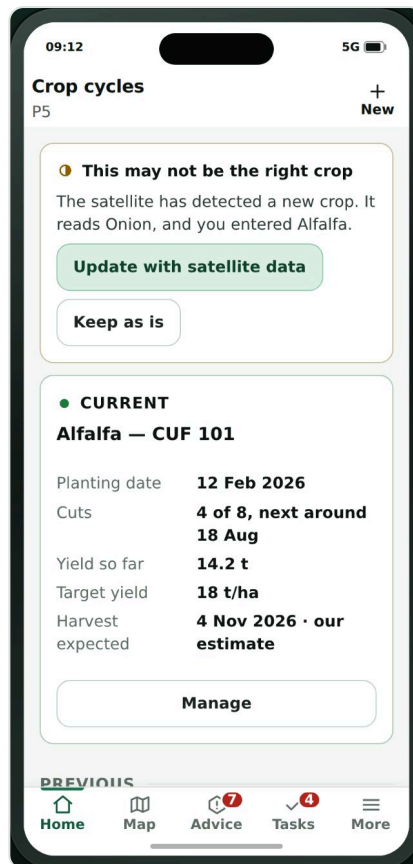

AFTER

- C348 Measures, date stepper, and explanatory content kept as they were.
- Irrigation parameters (efficiency, soil type, flow rate) moved here, editable from the plot's own settings. They belong to the plot and carry across recommendations.

B5 Crop cycles

BEFORE

AFTER

- C291–C297** When the satellite detects a different crop, both values are shown with clear options: "Update with satellite data" or "Keep as is".
- C289** Standardised on "Planting date" as the label.
- C287** Harvest date is now system-generated and clearly marked as an estimate.
- C279** Crop name removed from plot names — seasonal plots would otherwise need renaming each cycle.

B6 Add / edit crop cycle

09:12 5G

New crop cycle
P-01

There is already an open cycle on this plot: Alfalfa, started 12 Feb 2026. Close it first — record a harvest date and, if you have it, a yield.

Crop *
Choose a crop

Variety
[Empty text field]

Sowing or planting date *
08/03/2026

Expected harvest date
mm/dd/yyyy

Target yield
18 t/ha

Close the Alfalfa cycle

Close the Alfalfa cycle

Home Map Advice Tasks More

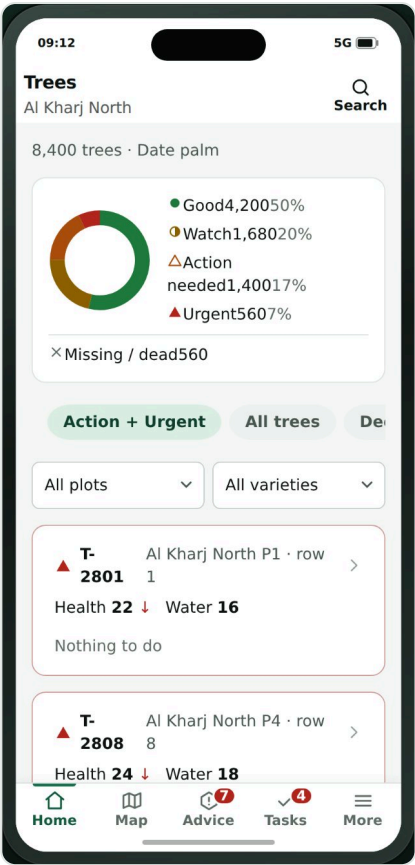

AFTER

- C287 Expected harvest date field removed — it was rarely revisited after being set.
- C288, C289 Simplified to "Planting date" (was "Sowing or planting date").
- C286 Only the crop and planting date are asked for now.

B9 Tree list

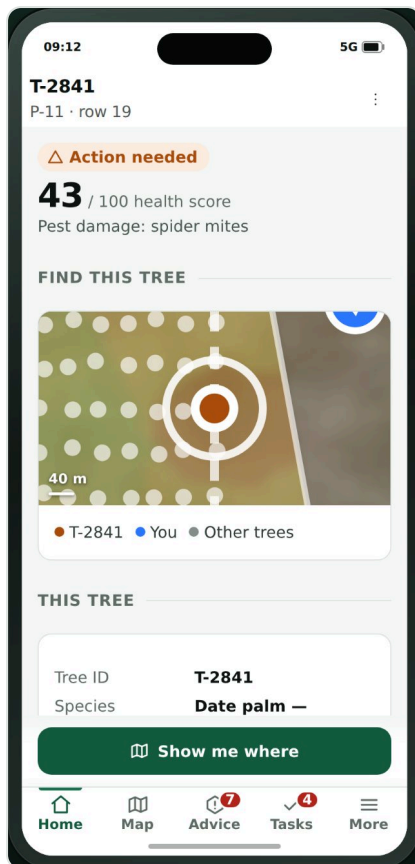

BEFORE

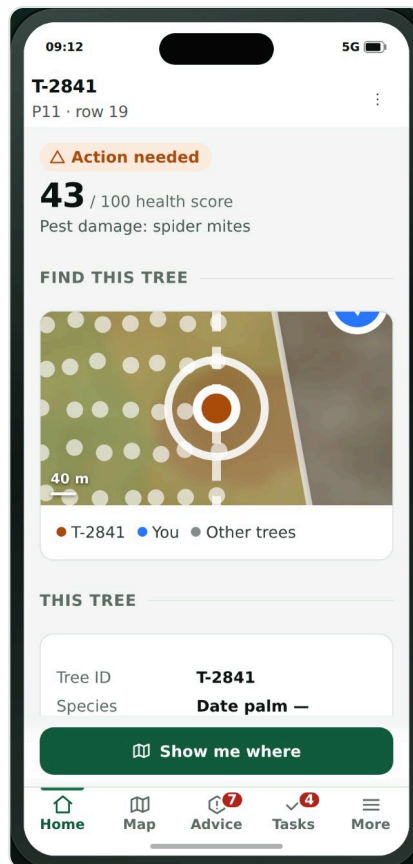

AFTER

- C334, C335
- Added filtering by tree type and by variety — growers think at both levels, and on a single-species farm only the variety filter is useful.
-
- Each filter only appears when there's more than one option.

B10 Tree detail

BEFORE

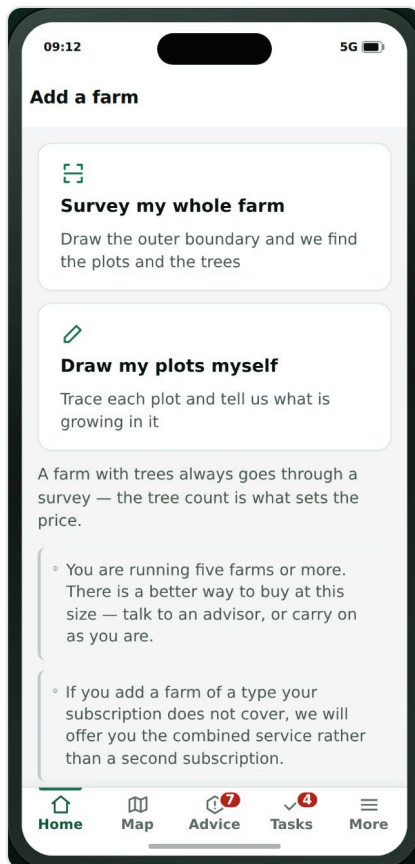

AFTER

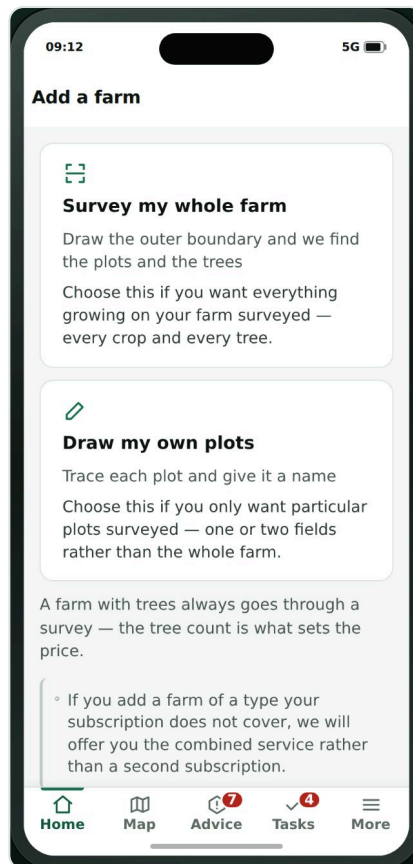

S26 "Chlorophyll" renamed to "Nutrient content" — it's closer to how farmers think about it.

S14 Upgrade copy now reads "Soil nutrient content".

B12 Add farm

BEFORE

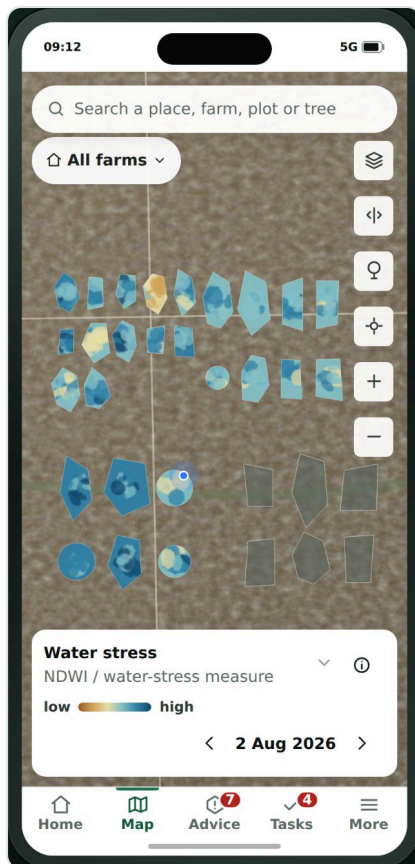

AFTER

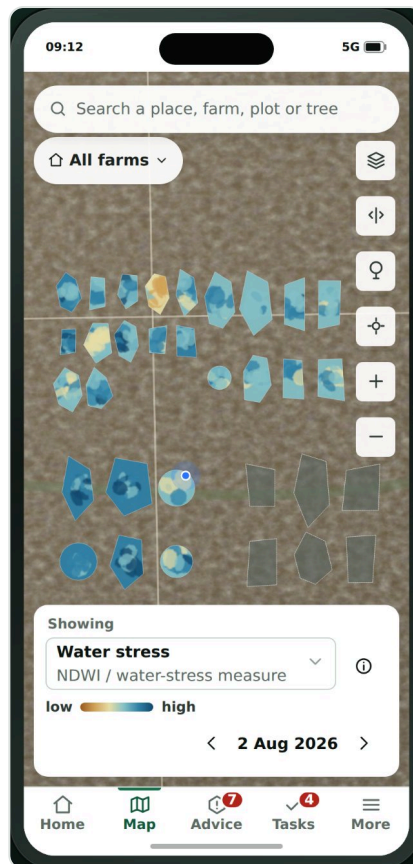

C259, C260, C261 Warning threshold moved from five farms to ten, matching the actual limit.

C091, C102 Route wording and guidance match the first-run fork.

C1 Map

BEFORE

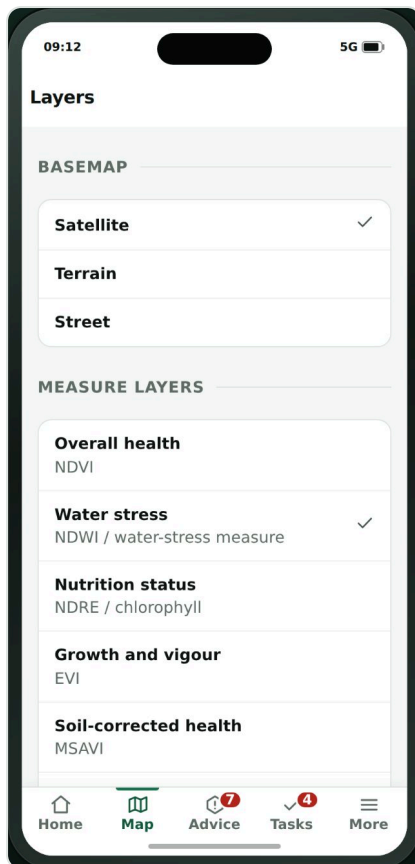

AFTER

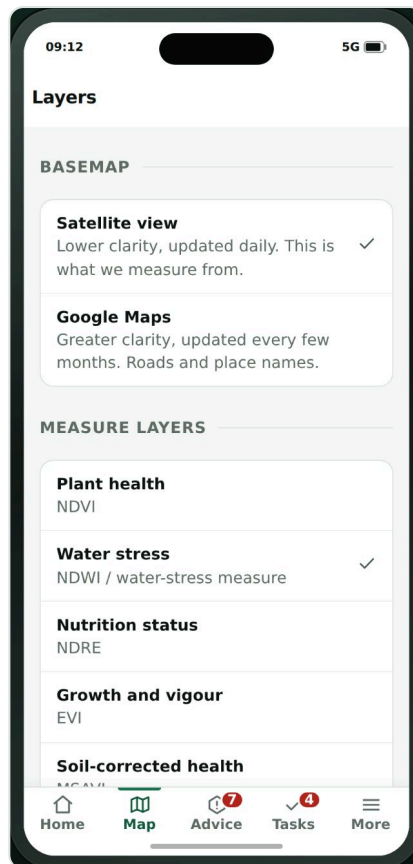

C263

Measure selector is now a bordered dropdown with a "Showing" label, making it easier to discover.

C2 Layers

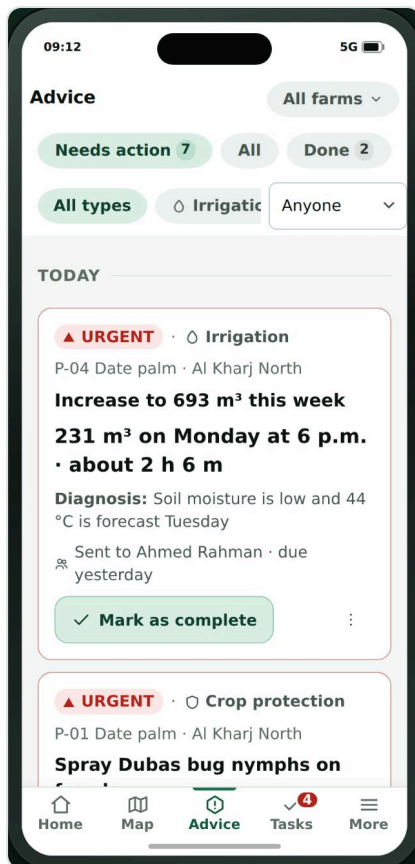

BEFORE

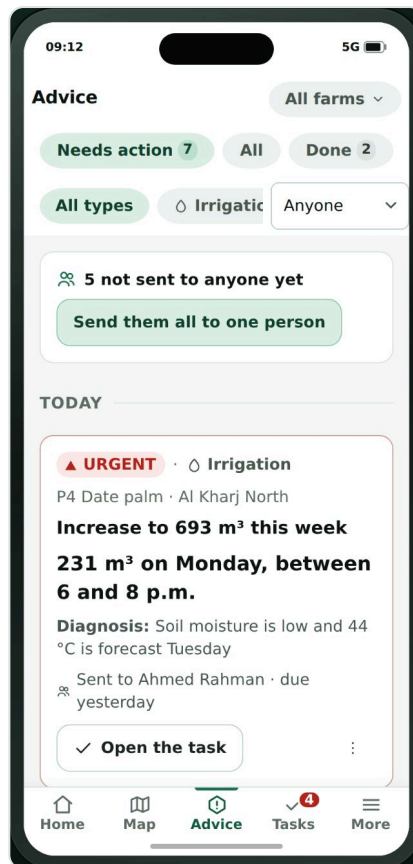

AFTER

- S44 Simplified to two base maps (Terrain removed).
- S45 Each base map now includes a short description explaining the trade-off between clarity and freshness.
- C412 Land use layer removed — outside the scope of a farm app.
- C416 Zoning layer removed.
- C422, C426 Irrigation map removed — the water stress measure layer already covers this, and the screen now says so.
- Advanced map layers and Variable rate maps groups removed entirely, along with their feature keys and plan-comparison entries.

D1 Advice inbox

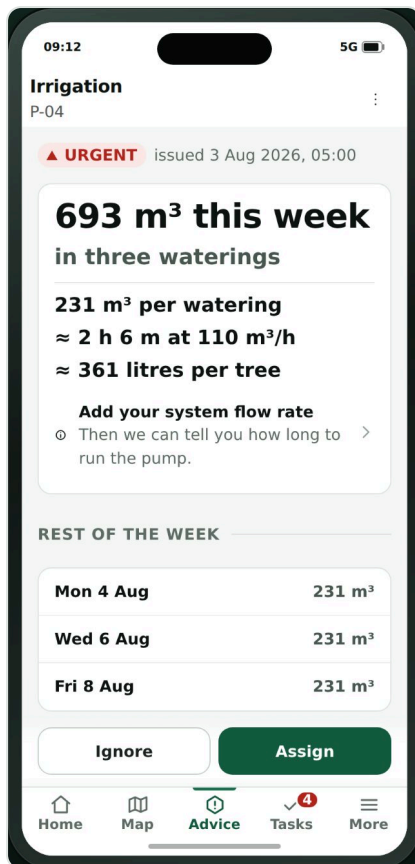

BEFORE

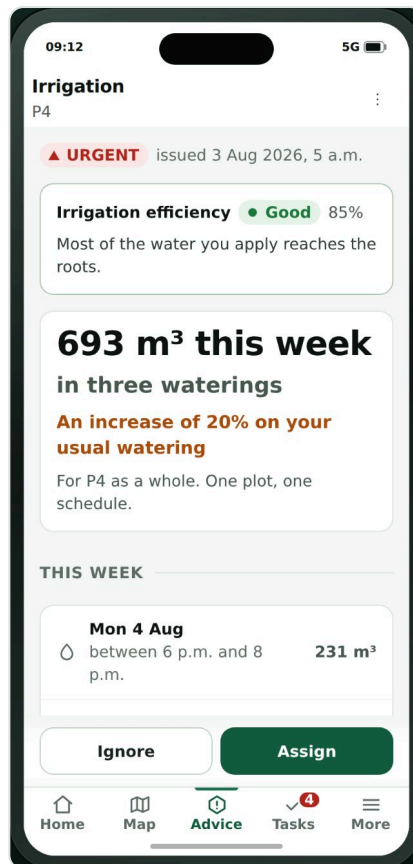

AFTER

- N03 Simplified to two actions: Assign and Ignore.
- N04 "Mark as complete" removed from advice cards — completing work happens on the task screen, by the person doing the work.
- C441 Once advice has been assigned, the card links to the task instead of offering to create another.
- C443–C445 "Send them all to one person" assigns every waiting item to one person (defaults to the supervisor), and can be left on as a standing rule.

D2 Irrigation advice

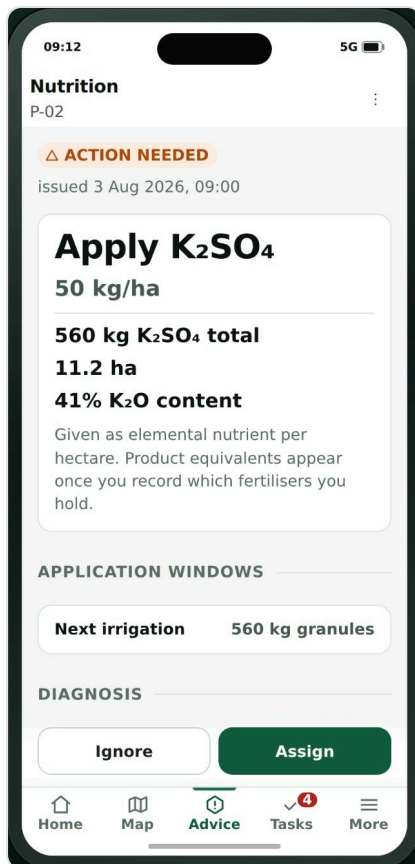

BEFORE

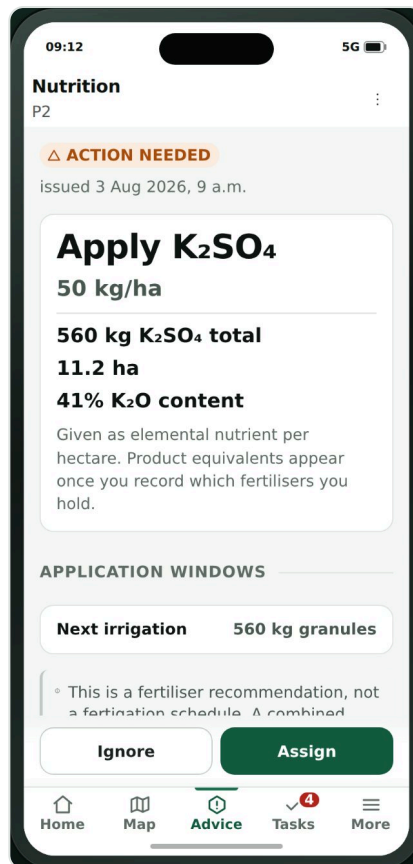

AFTER

- S42 Irrigation efficiency rating shown at the top for this plot.
- S37 Simplified to one weekly total instead of repeating the same figure in different units.
- S40 Recommendation framed as a change from usual practice (e.g. "an increase of 20%"), which is easier to act on.
- S39 Added a day-by-day schedule with a time for each irrigation.
- C427–C429 Times shown as a two-hour window — more honest than a precise start time when flow rate isn't measured.
- S38 One schedule per plot, clearly stated. Per-tree schedules aren't practical to carry out.
- S43 Over- and under-watering feedback included as a clear direction to increase or reduce.
- S41 Diagnosis and Assumptions sections removed.

D3 Nutrition advice

BEFORE

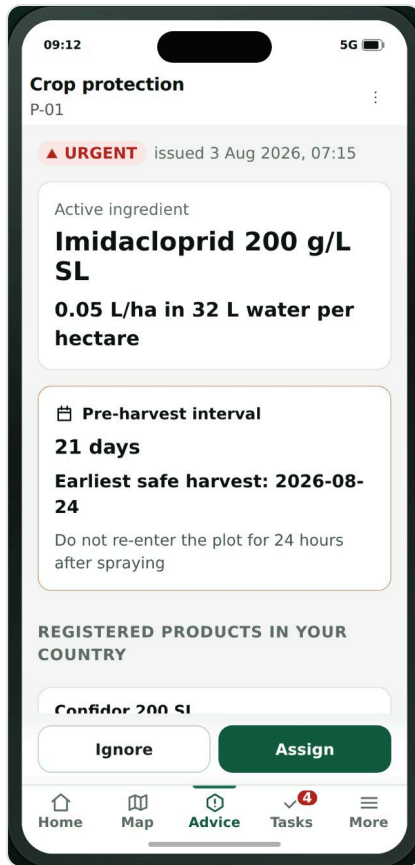

AFTER

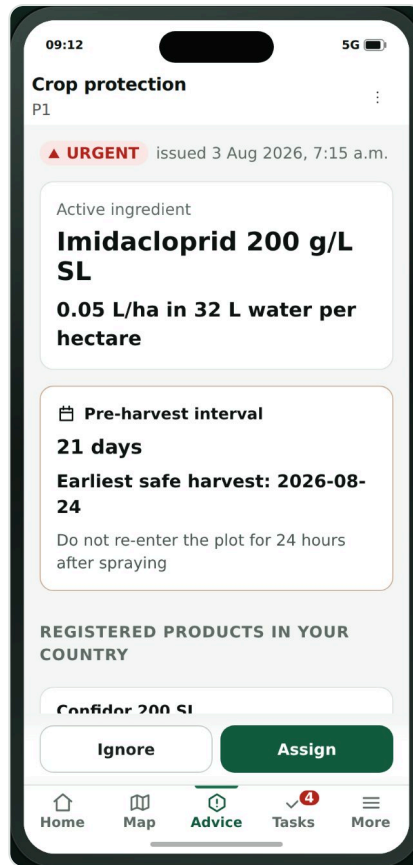

S41 Diagnosis and Assumptions removed here too — this screen is for the person doing the work, and the technical detail belongs in the advisory log.

WF5.116 All model inputs are still recorded in the advisory log, accessible from the ... menu.

D4 Crop protection advice

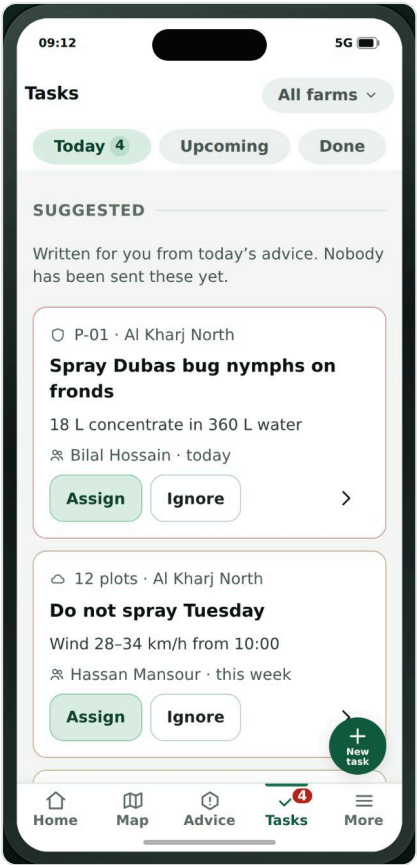

BEFORE

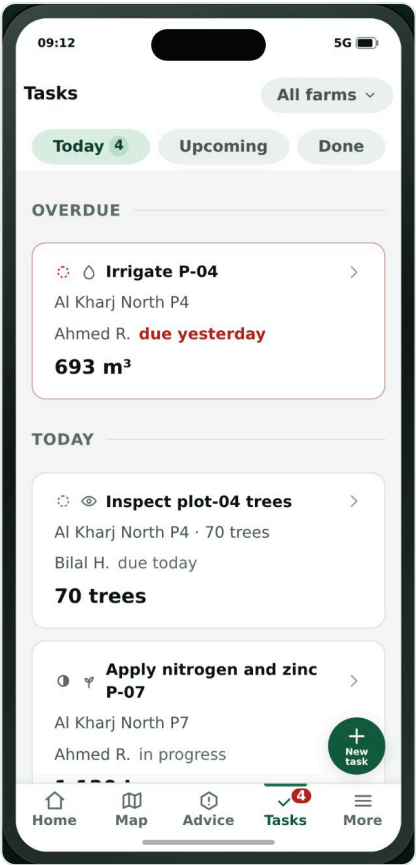

AFTER

- S41 Diagnosis removed. The practical details — active ingredient, rate, pre-harvest interval, label warning — are kept as they were.

E1 Tasks

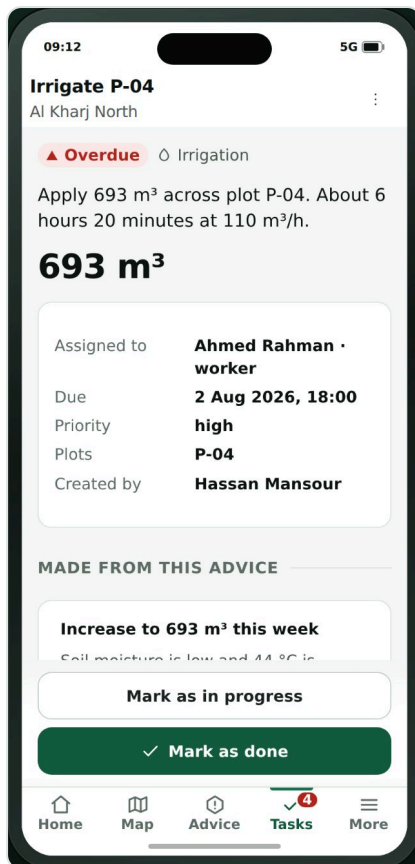

BEFORE

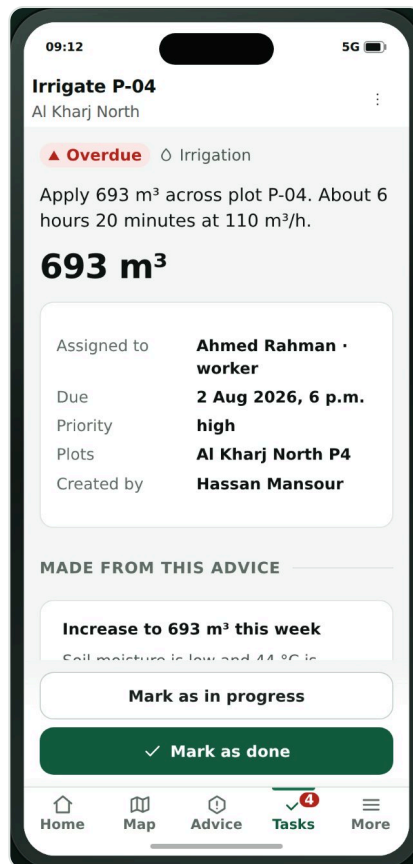

AFTER

- N03 SUGGESTED section removed. Tasks are created by assigning advice — there's a clear moment when something becomes work.
- C442 Ignore button removed from the task list.
- The list now only contains assigned work, so the task count reflects real commitments.

E2 Task detail

BEFORE

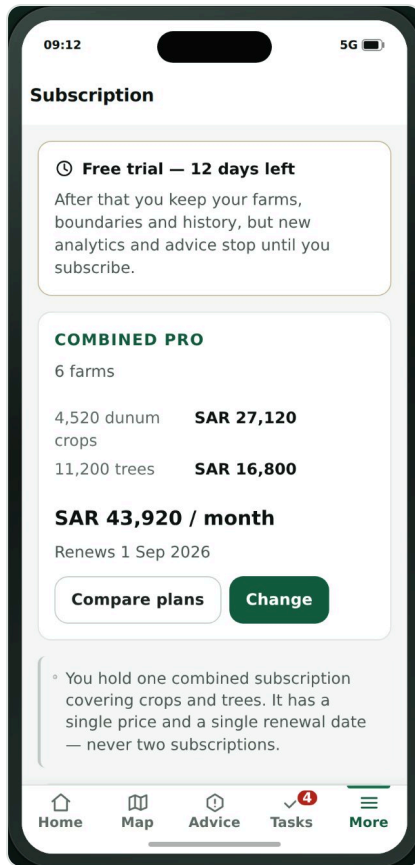

AFTER

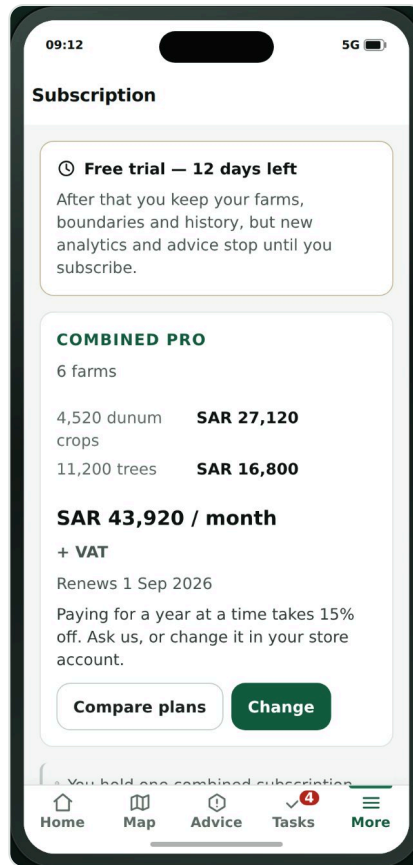

N04 "Mark as done" is a task-level action and lives on this screen.

— For tasks raised from advice, completion opens the advised-vs-applied record — a useful check on what was actually done.

F5 Subscription

BEFORE

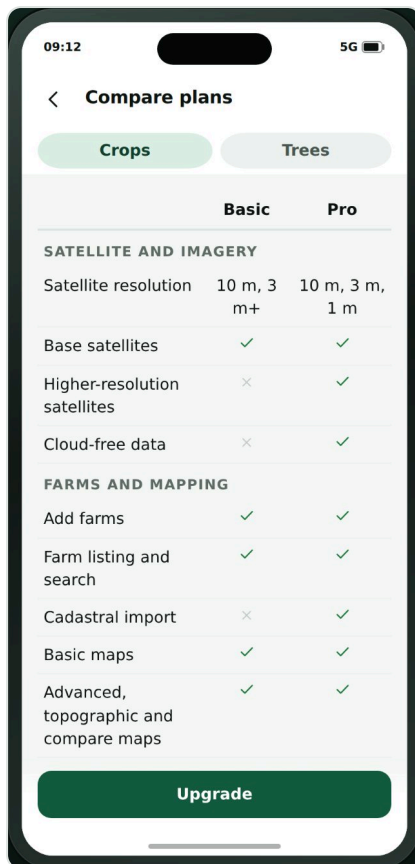

AFTER

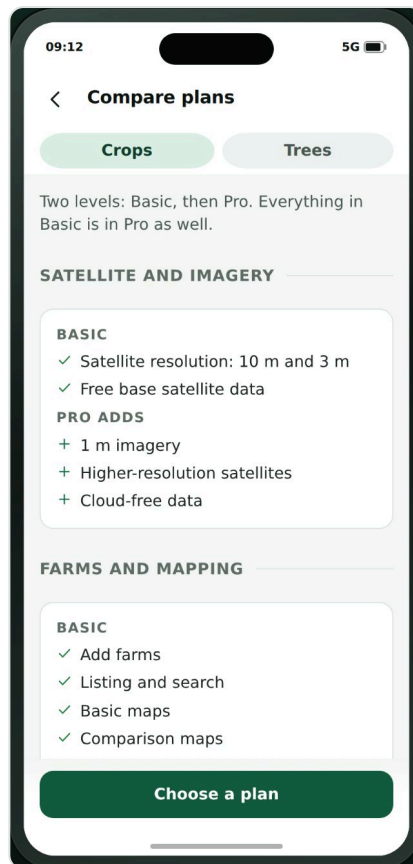

S34 "+ VAT" shown beside the price.

S32 Annual discount now displayed.

F6 Compare plans

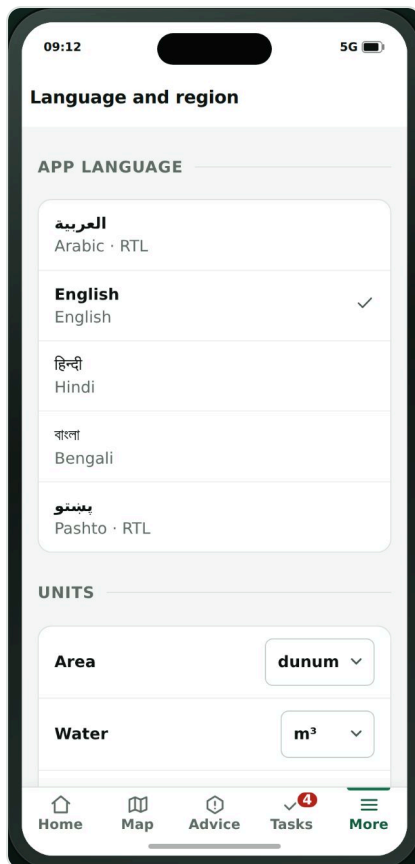

BEFORE

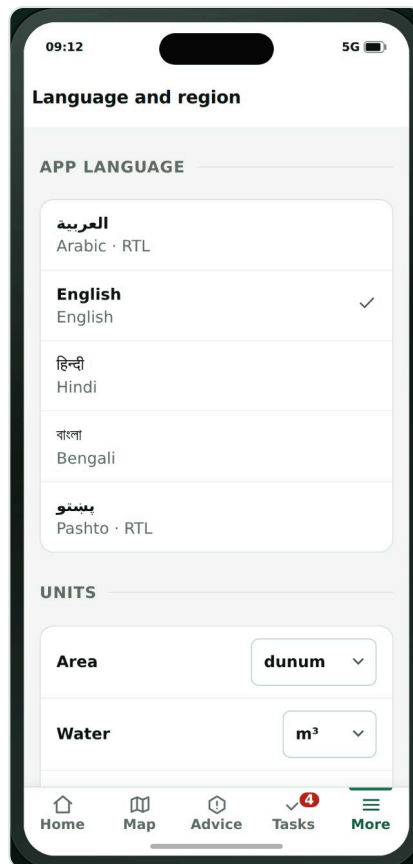

AFTER

- S04** Restructured: Basic and Pro are rows within each feature group, and Pro only lists what it adds. Clearer than the old two-column layout.
- S05** Filtered to the service the account holds; tabs only appear for combined accounts.
- S07** Consistent group order for crops and trees, with satellite and imagery first in both.
- S02** "Upgrade" button changed to "Choose a plan".
- S09–S17** Seventeen features renamed for clarity (e.g. comparison maps, farm advisory, soil nutrient content).
- S18–S27** Ten features removed (historical weather, time series, expert opinion, Agro Doctor, and others).
- S22, S23** Multi-user access and languages moved into "In every plan" — they're the same on both tiers.

F8 Language and region

BEFORE

AFTER

C058, C067

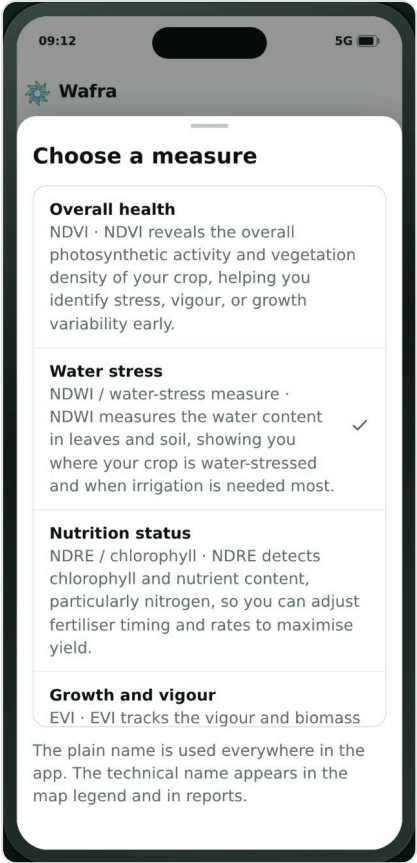

Acres removed from area units.

C430

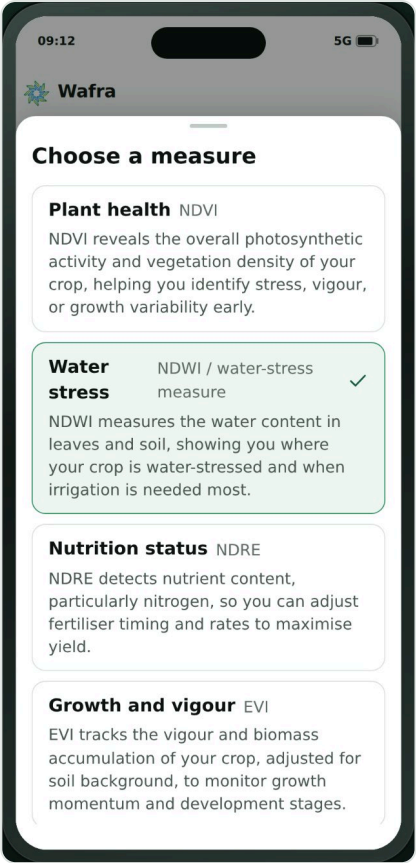

Added a 24-hour / a.m.–p.m. setting for the irrigation schedule's time windows.

MEASURE_PICKER

Choose a measure

BEFORE

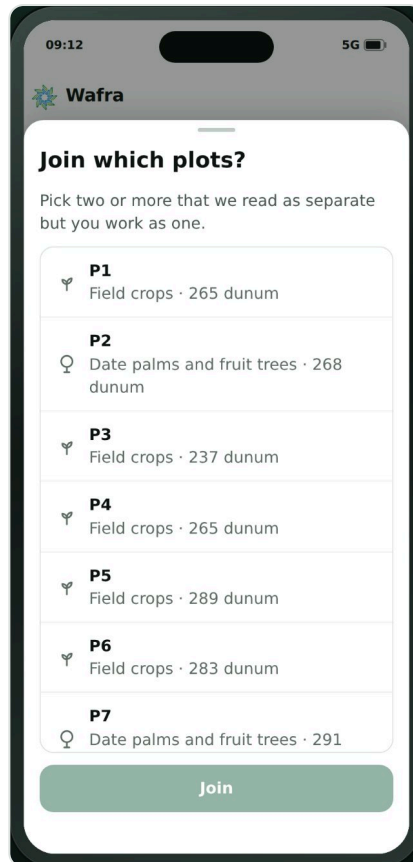

AFTER

N02 Each measure now has its own block with breathing room — easier to read and choose from.

Did not exist
before this review

BEFORE

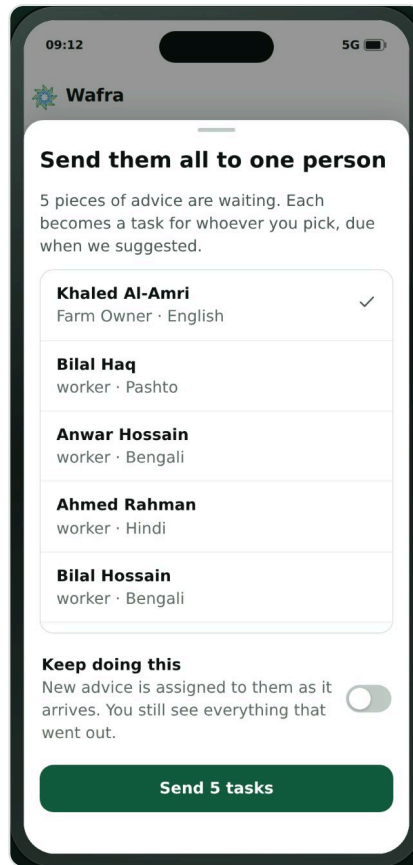

AFTER

C122, C123, C124 Choosing a tool on A11 now asks which plots it applies to, making the multi-plot operations easier to find and use.

Did not exist
before this review

BEFORE

AFTER

C443, C444

Every waiting piece of advice becomes a task for one person, due when the app suggested.

C445

The supervisor is offered first, since that's the most common choice.

—

"Keep doing this" makes it a standing rule. What was sent and to whom stays visible, and it can be turned off from the same place.

ASSUMPTIONS

How we calculate for this plot

09:12 5G

Wafra

Good morning, Khaled

MONDAY · 3 AUG

▲ 2 farms need attention

Assumptions we used

Irrigation efficiency

85 %

Soil type

Sandy loam

System flow rate

m³/h

* These are saved against the plot, not against this one recommendation, and future advice is recalculated from them. The advice you are looking at now is kept as it was.

Save

BEFORE

09:12 5G

Wafra

Good morning, Khaled

MONDAY · 3 AUG

▲ 2 farms need attention

How we calculate for this plot

Irrigation efficiency

85 %

Soil type

Sandy loam

System flow rate

m³/h

* These three are what the watering calculation uses. Correcting them changes every future recommendation for this plot; advice already issued is kept as it was.
