
Mockup Updates — v1.4

The thirty comments on the 18 August deck, taken screen by screen: how the mockup looked when the comments were written, and how it looks now.

Each screen is shown before and after, with notes on the comments it answered underneath. A dashed frame on the right means the screen has been deleted in this round.

Wafra Farm App · 11 screens · iPhone 16 Pro Max, English, Owner role, Combined Pro plan

A5 Create your account

09:125G

< Create your account

Mobile number *

+96 5X XXX XXXX

We send a code to this number to check it is yours.

Email address *

name@example.com

Your reports go here. We do not send a code to it.

☐ I agree to the Terms of Use and Privacy Policy

You can sign in afterwards with either the number or the address. Only the number is checked.

Send code

BEFORE

09:125G

< Create your account

Your name *

Mobile number *

+96 5X XXX XXXX

OTP verification required.

Email address *

name@example.com

Farm reports are sent to this email address.

Create a password *

At least 8 characters

☐ I agree to the Terms of Use and Privacy Policy

Workers you invite sign in with a short code — no password needed.

Send OTP to mobile number

AFTER

- Slide 1

We added "Your name" at the top of the form and "Create a password" after the email address. Both come across from A7, which this round deletes, so creating an account is now a single form.
- Slide 1

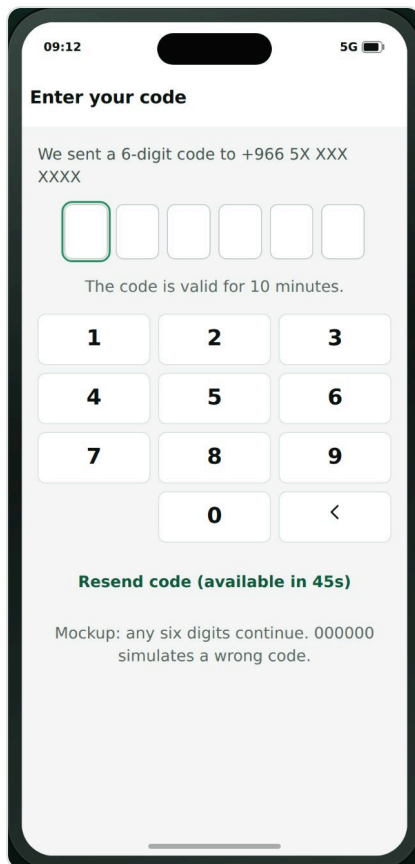

The mobile hint now reads "OTP verification required." and the email hint reads "Farm reports are sent to this email address."
- Slide 1

The gap between "I agree to the Terms of Use and" and "Privacy Policy" is closed. The links keep their full tap target; the padding around them no longer takes up room in the line.
- Slide 1

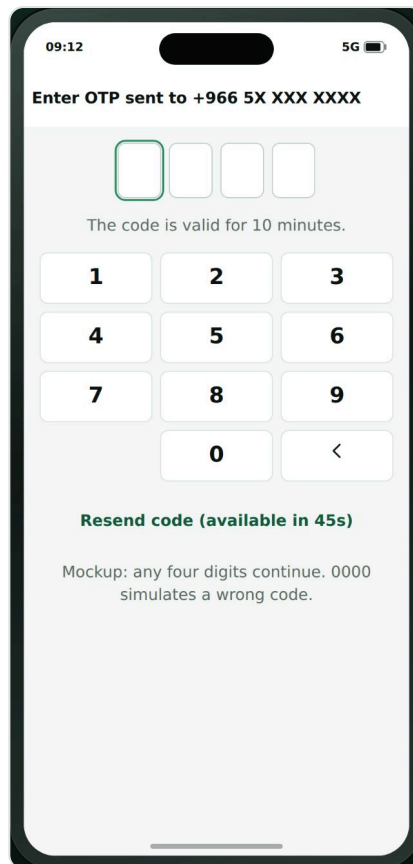

The paragraph about signing in afterwards with either identifier has been deleted.
- Slide 1

The button now reads "Send OTP to mobile number", and it waits for all five answers: name, number, address, password and the tick.

A6 Verify code

BEFORE

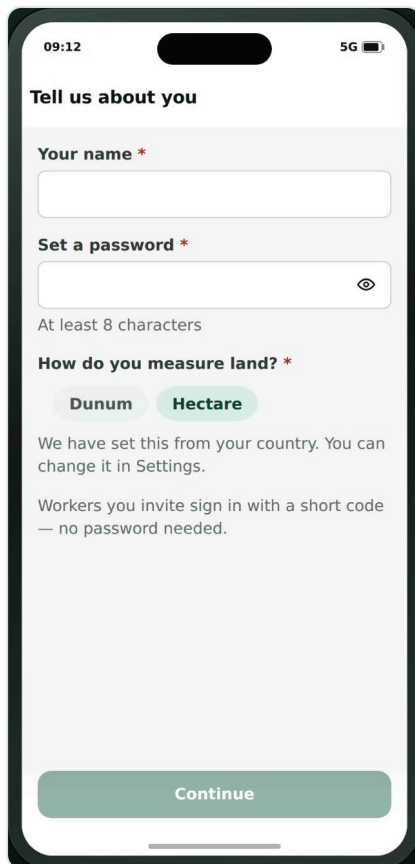

AFTER

Slide 2 The heading and the sentence beneath it are now a single line: "Enter OTP sent to +966 5X XXX XXXX".

Slide 2 The code is four digits rather than six. That deviates from WF4.038, so the reasoning is written up in the README: the code expires in ten minutes and the account locks after five wrong tries, so two further digits add little, and four are easier to carry across from another app.

A7 Your details and units

09:12 5G

Tell us about you

Your name *

Set a password *

At least 8 characters

How do you measure land? *

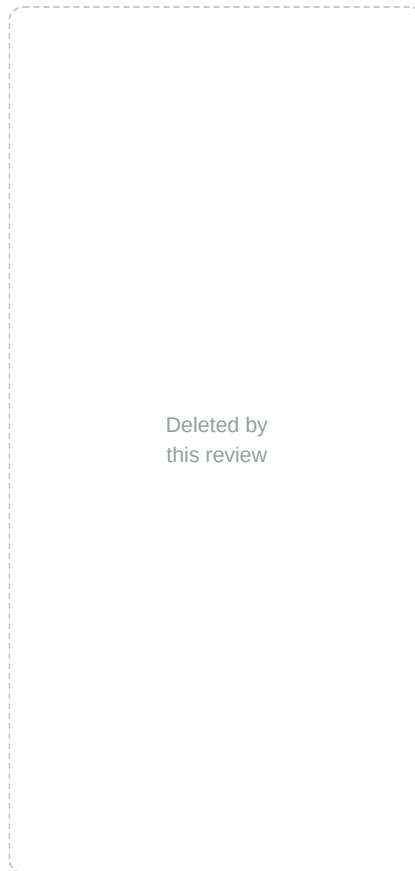

Dunum **Hectare**

We have set this from your country. You can change it in Settings.

Workers you invite sign in with a short code — no password needed.

Continue

BEFORE

AFTER

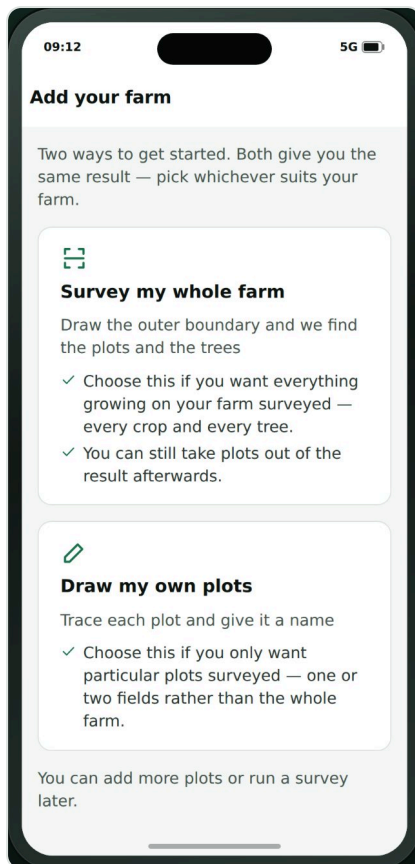

Slide 3

The screen is deleted. The name and the password are part of creating an account, so they are asked on A5. The land unit is not an account detail at all, so it is asked on A9, one screen before the app first shows an area.

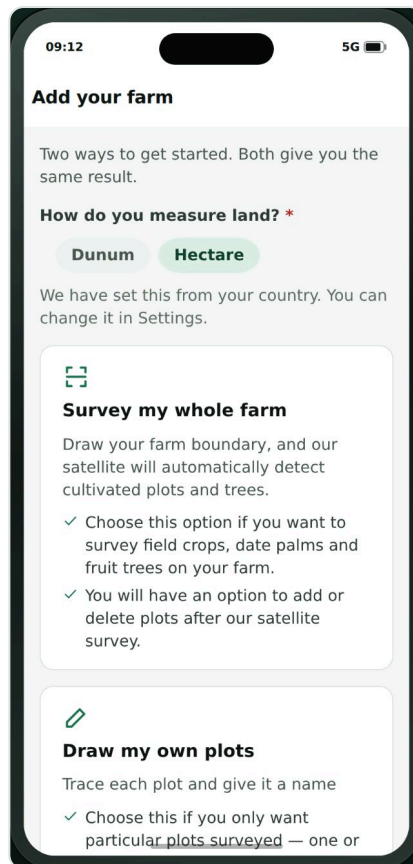

Slide 3

Password recovery used to borrow this screen for its last step, which meant a returning user was asked for his name again on the way to a new password. Reset now has three steps of its own.

A9 Add your farm

BEFORE

AFTER

Slide 4 "How do you measure land?" now sits on this screen, pre-selected from the country (WF4.043).

Slide 4 The lead paragraph no longer ends with "— pick whichever suits your farm".

Slide 4 The survey card now says what the satellite does: it detects cultivated plots and trees from the boundary. It also says that plots can be added or deleted after the survey.

Slide 4 Add a farm on B12 used to draw its own copy of these two cards, which is how the same choice came to be described in two sets of words. It now draws A9's.

A12 What should our satellite survey?

09:12 5G

What should we cover?

Tell us what you grow. We'll only monitor — and charge for — what you choose here. You can change this later.

Field crops

Everything you sow and harvest — wheat, alfalfa, potato, tomato

Date palms and fruit trees

Counted and priced per tree — date palm, citrus, mango, grape

Both

One subscription covering the fields and the trees

Name this farm

Farm 7

Leave it blank and we number it for you.

We work out what is actually there from the imagery. This just tells us what to look for.

BEFORE

09:12 5G

What should our satellite survey?

Tell us what you grow. We'll only monitor — and charge for — what you choose here. You can change this later.

Name your farm

Farm 1

Field crops

Priced per area. For example: wheat, alfalfa, Rhodes grass, okra, eggplant, potatoes, melon, etc.

Date palms and fruit trees

Priced per tree. For example: dates, olives, citrus, mango, pomegranate.

Both

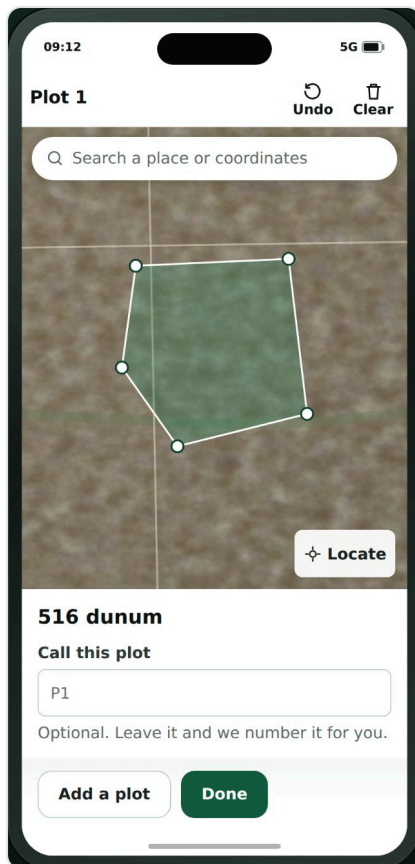

One subscription covering field crops, date palms and fruit trees.

We work out what is actually there from the imagery. This just tells us what to look for.

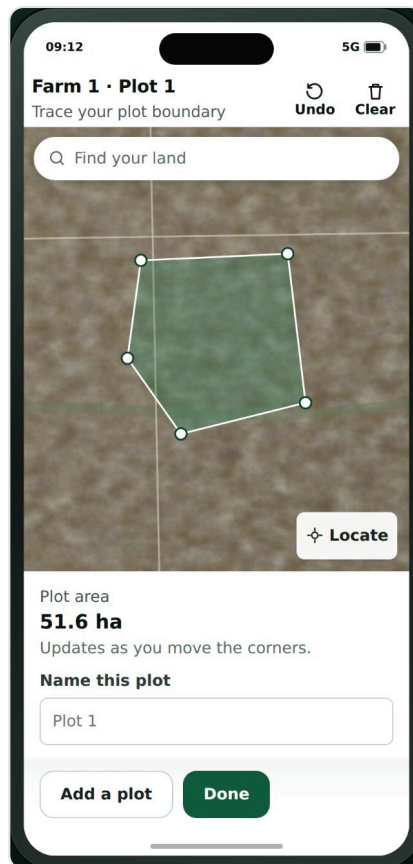

Continue

AFTER

- Slide 5** The title now asks about the satellite. Each option says how it is priced: per area for field crops, per tree for the trees.
- Slide 5** "Name your farm" moves to the top, above the options. The note about being numbered automatically has gone, because the placeholder already shows the name he gets if he types nothing.
- Slide 5** That placeholder reads Farm 1. The number counts the farms the account holds, which during registration is none, whatever the demo database happens to be carrying.

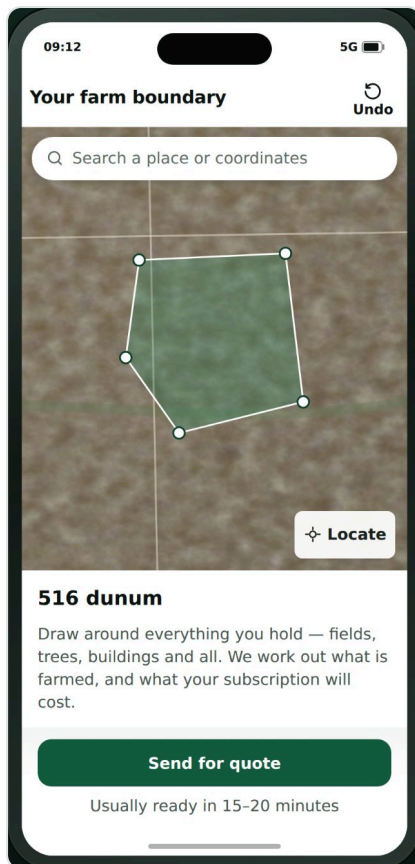

BEFORE

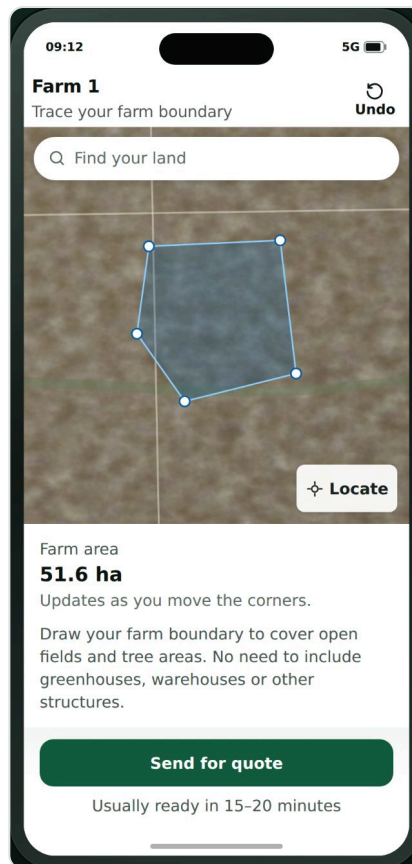

AFTER

- Slide 6** The app bar reads "Farm 1 · Plot 1" over "Trace your plot boundary".
- Slide 6** The area is labelled "Plot area", and the screen now says that the figure follows the shape as it is dragged. It always did, but nothing on the screen said so.
- Slide 6** The field is labelled "Name this plot" and the placeholder is "Plot 1". P1 has gone from the whole app: drawn plots, survey results and the 32 plots in the fixtures. No screen shows both conventions now.
- Slide 6** The search bar now opens a sheet with three ways to find the land: search on the map, enter a town or locality, or use my current location.

A10 Survey my whole farm

BEFORE

AFTER

- Slide 7** The app bar reads the farm name over "Trace your farm boundary", and the area is labelled "Farm area".
- Slide 7** The farm boundary is now blue, so it reads differently from the green used for plots. You suggested brown or blue; we went with blue because the basemap is mostly tan desert soil and a brown line gets lost in it.
- Slide 7** The help text now reads "Draw your farm boundary to cover open fields and tree areas. No need to include greenhouses, warehouses or other structures." That reverses the old instruction, which asked for buildings to be included. The farmer now draws what he is buying.
- Slide 7** The search bar offers the same three ways to find the land.

FORGOT

Reset your password

09:12 5G

Reset your password

We will send a code to your mobile number or email. Enter it, then choose a new password.

AFTER

Slide 3

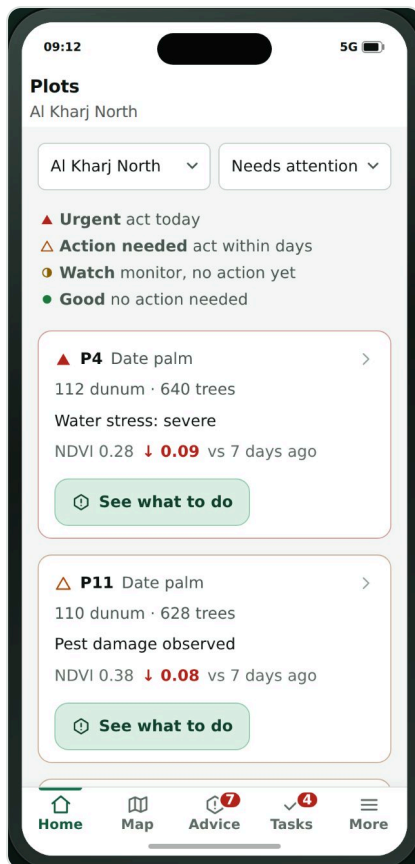

Now that A7 is gone, reset has three steps of its own: identifier, code, new password.

B12 Add a farm

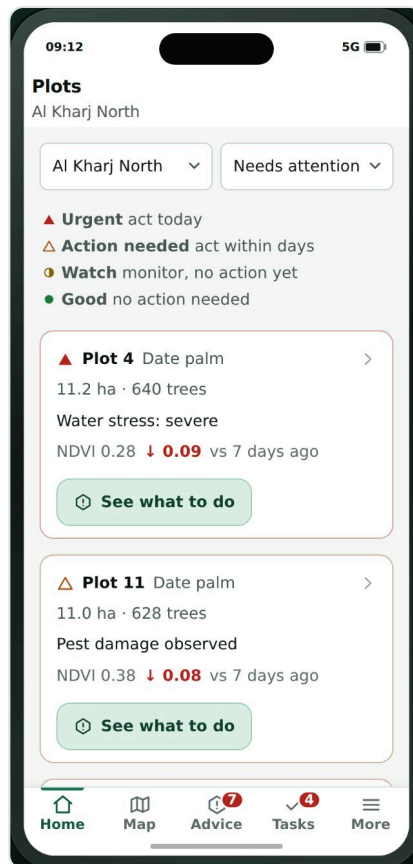

Slide 4 This screen draws A9's pair of cards rather than its own copy of them, so both carry the new wording.

B3 Plots

BEFORE

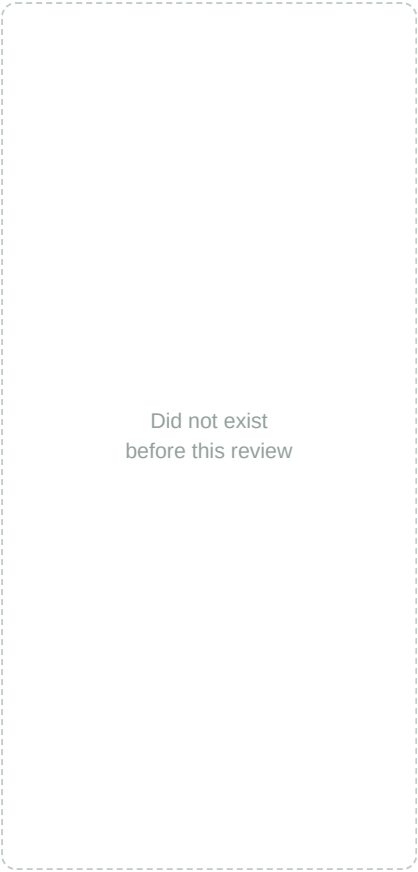

AFTER

Slide 6

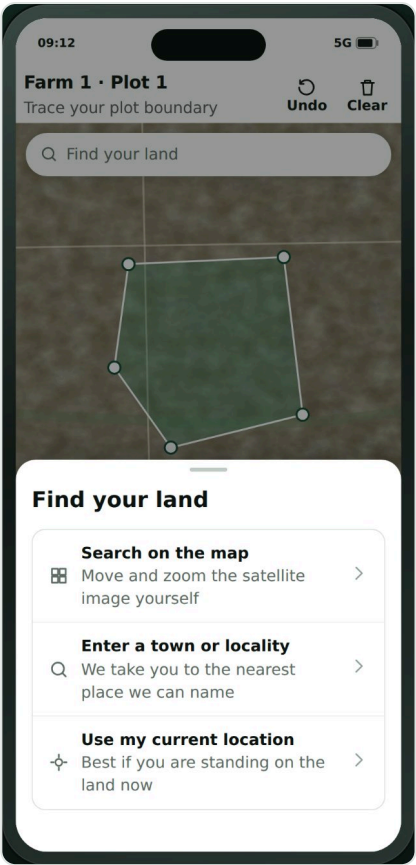

Every plot reads "Plot 1" rather than "P1", here and in every list that spans more than one farm.

FIND_PLACE

Find your land

BEFORE

AFTER

Slides 6, 7 A new sheet, sitting behind the search bar on both drawing screens. It offers the three ways of finding the land.
